Please Review: Additional Resources in Response to the Infant Formula Shortages Shared by MDH

May 19, 2022 – Given the heightened sense of urgency around the national infant formula shortages, MedStar Family Choice is requesting all providers review this informative bulletin provided by the Maryland Department of Health (MDH).

In the documentation, you will find information on:

- How to engage with the local Women, Infants, and Children (WIC) offices for assistance in finding infant formula substitutes that may not have been previously covered by the program;
- How to enroll families that are not yet WIC participants; and
- How to directly reach out to infant formula manufacturers for specialty formulas.

Please take the time to review the materials to support members in need of extra assistance through this shortage.
